

TenderHub CLI & Commands Reference Guide

Complete Technical Runbook for Development, Crawlers, and Data Maintenance

Author: Lead Systems Architect

Date: October 2026

Classification: Internal Technical Manual

Version: 2.4.0

ABSTRACT

Rapid reference manual containing all command-line operations for backend server execution, automated portal crawling, database backup/restore, maintenance scripts, and frontend bundling.

1. Backend Execution Commands (backend/)

```
# Server Operations
npm run dev           # Start local development server with nodemon (Port 8000)
npm start             # Start production server (node src/server.js)
npm run worker        # Start standalone BullMQ queue worker process

# Web Crawling & Ingestion
npm run scrape:latest  # Fetch notices published in the last 24-48 hours
npm run scrape:all     # Crawl all active tenders across all departments
npm run scrape:date    # Prompt for historical date crawl
npm run fetch:pending-docs # Re-attempt document downloads for incomplete tenders

# Database & Maintenance
npm run backup:db      # Export MongoDB collections to local archive
npm run restore:db     # Restore database from archive
npm run purge:expired  # Mark tenders past bid submission date as EXPIRED
npm run reconcile:dates # Audit and normalize timestamp formats
npm run sync:mirror    # Synchronize primary R2 bucket to secondary backup
npm run manuals:all    # Compile all PDF documentation guides into docs/
```

2. Frontend & Admin Commands

```
# Frontend (frontend/)
npm run dev           # Start local Vite server (http://localhost:5173)
npm run build         # Compile production bundle into dist/
npm run preview       # Preview production build on port 4173
npm run lint          # Run ESLint across JSX and JS files

# Admin Panel (admin-panel/)
npm run dev           # Start Admin console on port 5174
npm run build         # Compile Admin console production bundle
```

3. Quick Verification curl Commands

```
curl -s http://localhost:8000/health
curl -s http://localhost:8000/api/v1/billing/plans
curl -s "http://localhost:8000/api/v1/tenders?page=1&limit=5&status=ACTIVE"
```
